UKRAINE AND NATO IN THE CONTEXT OF THE STANDARDIZATION POLICY: ADMINISTRATIVE AND LEGAL ASPECTS

Paper is devoted to the administrative-legal aspects of standardization in the field of defense, as well as the search for problems and possible ways of their solution in the context of bringing the activities of the Armed Forces of Ukraine into compliance with NATO standards. The directions of the system's development are formulated, in particular, the extent of its readiness to ensure the processes associated with Ukraine's accession to NATO is determined.

It was determined that the priority direction in developing standards in modern conditions is their harmonization with international normative and legal acts in the field of security and defense. At the same time, the necessity of mandatory review of interstate normative documents on questions of standardization in the field of defense is an urgent need.

It has been proved that in the modern challenges radically changed the state approach to the principles of organizing the development and production of defense (military) products and state defense policy, which is implemented through a state defense order.

In the research, factors influencing the processes of standardization in the field of defense are identified. Given the proper equipment of the Armed Forces of Ukraine with modern weapons, the restoration of the capabilities of the defense-industrial complex, the creation of new models of military equipment and weapons, Ukraine will be able to join NATO.

It is acknowledged that in the modern administrative-legal regulation of the standardization in the field of defense of foreign countries, NATO is the main factor in the establishment and functioning of defense standardization systems and has a direct impact on the protection of sovereignty, territorial integrity and security, and the protection of the society and the state.

It has been established in that significant intensification of international cooperation processes and the absence of military standards for ensuring the activity of the Armed Forces of Ukraine significantly slow down the process of achieving the required level of interoperability in the operational, material, administrative and other areas of the Armed Forces of Ukraine with the NATO member states. Under the conditions of the military standards, NATO will become the appropriate regulatory framework for planning the activities of the units of Ukrainian Armed Forces.

It is concluded that standardization in the field of defense should take into account the basic principles of similar systems of standardization of foreign countries, to meet the national interests of the state of Ukraine. At the same time, the creation of legal bases for standardization in the field of defense should be aimed at the improvement of defense capabilities of the Armed Forces of Ukraine, mobilization readiness of the state, security of economical objects, life, health, etc.

Keywords: standartization, national security, international cooperation, state policy, MS, MS NATO.
