Kroshko Valerii,

Retired Militia Colonel, Head of Kyiv Region Department of Ukrainian Section of the International Police Association, Kyiv, Ukraine

LOGIC STRUCTURE OF SYSK PHILOSOPHY OF PROFESSOR O. Yu. SHUMILOV (to the 63rd birth anniversary and anniversary of death)

This year on August 22 two memorable dates were celebrated: the 63rd anniversary of the birth and the anniversary of the death of professor, doctor of law sciences Oleksandr Yuliiovych Shumilov – a great scientist, a man of encyclopedic knowledge, the permanent editor-in-chief of the journal "Investigator (Detective)" (Moscow).

Oleksandr Yuliiovych was born on August 22, 1956 in the village of Sosnovka, Kemerovo Region, in a family of geologists. After graduating from high school, he served as a private member of the KGB border troops under the USSR Council of Ministers, graduated from the Higher School of the KGB of the USSR (1982), fulltime graduate school (1890) and doctoral studies at the Academy of the FSB of Russia (1997). In 2002, he retired with the rank of colonel, having served in operational and scientific-pedagogical work for 26 years. The paradigm of O.Yu.Shumilov, an outstanding Russian scientist, freed from the burden of empiricism the theory of operational investigative activity, based on the universal laws of dialectics, and, in particular, on the law on the connection of particular, general and special. The scientific and theoretical level of the paradigm of O.Yu. Shumilov is most fully represented by the three-volume monograph "Operational-Search Science in the Russian Federation" (in 4 books), published in 2013–2016 as well as in the books "The Phenomenon of Scientific Schools of Professional Investigation", "Introduction to Scientometrics", "The Course of the Fundamentals of Operational Investigative

Activity", in author's encyclopedias and dictionaries, in dozens of books and in hundreds of papers. The most important work of Professor O.Yu.Shumilov is the «Philosophy of Operational Investigative Work», (2-nd volume (2014) of the above mentioned three volumes). Created for the first time by Professor O.Yu. Shumilov, the Investigation Philosophy, in fact, revealed the methodology of the science of investigation and Syskology, as well as the beginning of the Theory of Detective Prevention, predetermining the place of the principle in the worldview and the essential component of the detective's worldview. According to O.Yu. Shumilov, knowledge of the laws of investigation eliminates the risk of «cognitive dissonance» on the path to harmony and detective reality. Cesare Beccaria showed the need for general prevention, and the laws of O.Yu. Shumilov serve as the basis for the creation of the Theory of Detective Prevention. The category "law" is ambiguous in the definition; the concepts of "principle", "norm", "rule" and others are identical to it. Detection theories, according to O.Yu. Shumilov, are associated with scientific and technological progress, with technology, special equipment and are being investigated behind closed doors. The studies of professor Oleksandr Yuliiovych Shumilov, without a doubt, predetermined the development of scientific and practical investigation for future. He will always remain with us, for the memory of him and his teachings about detectives will live in the detective community forever!

Keywords: O.Yu. Shumilov, laws of the professional investigation, law of three criteria for the sysk, logical structure of philosophy of sysk, sysk reality, sysk space, sysk relations.
